POWER BI REPORT

Introduction

This report analyzes the electoral bond scheme in India, utilizing data from multiple tables to gain insights into political funding trends, donor behavior, and recipient dynamics.

Data

The is connected though the sql server. The data contains 4 tables mainly

- Bankdata - Which contains banks details such ass address, city, state, branch code number.
- Bonddata - Contains the unique keys, their denominations.
- Doner data - Contains the companies names which purchased bonds, unique keys, branch code of the bank which they purchased, expiry date and purchase date.
- Receiverdata - Contains the party names which received bonds, unique keys, branch code of bank where they encashed bond and pay branch code.

Additional tables

Additional tables were created to enhance data analysis by linking donor information with banking details, allowing for a more granular understanding of donor behavior.

- Donor bankdata
- Donor Bonddata

Data Modeling

The tables were connected using appropriate relationships based on common fields like unique keys, allowing for integrated analysis across different dimensions.
